## Principles of drug disposition in domestic animals: the basis of veterinary clinical pharmacology.

Author(s) : [Baggot, J. D.](#)

Author Affiliation : Sch. Vet. Studies, Murdoch Univ., Western Australia.

Book : [Principles of drug disposition in domestic animals: the basis of veterinary clinical pharmacology](#). 1977 pp.viii + 238pp. ref.152 X 234 mm; many

Abstract : The alternative title is "The basis of veterinary clinical pharmacology". The author emphasizes in the preface that, despite the widespread use of drug disposition data in domestic animals, most Schools of Veterinary Medicine still place little emphasis on clinical pharmacology.

pharmacology in their curricula. The dose of a drug required to produce optimal effectiveness in an animal can either be derived mathematically or from several clinical evaluations. The opening chapter contains a useful account of drug transport including the principles of drug transport across biological membranes. Drug metabolism is comprehensively covered in the next chapter with particular emphasis on biotransformation. The author then follows the logical sequence of drug distribution, biotransformation and excretions followed by an elaboration of the principles of pharmacokinetics and dosage. Finally, there is a short section on drug therapy in neonatal animals. There is much valuable information in this book, for example, the effect of renal impairment on drug excretion and the effects of pyrexia and liver disease in drug biotransformation. It is to be hoped that, for the next edition, the author will be able to include the chapters referred to in the introductory preface.
