This paper presents the principal findings from a three-year research project funded by the US National Science Foundation (NSF) on ethics of human enhancement technologies. To help untangle this ongoing debate, we have organized the discussion as a list of questions and answers, starting with background issues and moving to specific concerns, including: freedom & autonomy, health & safety, fairness & equity, societal disruption, and human dignity. Each question-and-answer pair is largely self-contained, allowing the reader to skip to those issues of interest without affecting continuity.

Keywords: [human enhancement](#); [human engineering](#); [nanotechnology](#); [emerging technologies](#); [policy](#); [ethics](#); [risk](#)
