Resumen

This is an analysis of Apple's new programming language: Swift. The investigation takes place in the University of Applied Sciences FH Joanneum in Styria, Austria. A guideline for time and skills administration is written based on the experience developing an iOS mobile application. This application is developed for the administration of an inventory in iPhone and iPad. It is called KMU Inventory App. The outputs of this work are: a document for guiding new developers in this area and the analysis of the hardware and software involved.
