Exploring the urban community: A GIS approach.

Authored by accomplished urban geographers and GIS experts, "Community: A GIS Approach" expands upon this timely, applied approach by incorporating new "internet GIS" Google Earth™ activities, which do not require students to own expensive software or travel to a school lab. New exercises are also provided for ArcGIS 9.3 and 10, the latest version of the industry-dominant software. Coupled with current examples and applications from around the world, including a greater focus on India and China, "Community: A GIS Approach" offers a fresh approach to the study of urban geography.
