Abstract

Aristotelian assertive syllogistic logic (without modalities) is embedded in the author's *Lingua Cosmica*. The well-known basic structures of assertions and conversions between them in this logic are represented in *LINCOS*. Since these representations correspond with set-theoretic operations, the latter are embedded in *LINCOS* as well. Based on this *valid argumentation* in Aristotle's sense is obtained for four important so-called *perfect* figures. Their constructive (intuitionistic) verifications are of a surprisingly elegant simplicity.
