Abstract

The history of RF and microwave computer-aided engineering is documented in the annals of the IEEE Microwave Theory and Techniques Magazine. This paper presents analytically based models of microwave components and simple computer-aided techniques to cascade, cascade, and optimize the responses of linear microwave circuits. Development has become rapid with computer-oriented microwave practical modeling and optimization globally model and optimize large circuits. The pursuit of accurate models of active devices and of passive components is a major challenge.

Item Type: Article

Divisions: Faculty of Engineering and Physical Sciences > Electronic Engineering > Advanced Technology I
