Visual interactive optimization Network optimization Networ

(43)

Network models have been very useful for analyzing supply chains, vehicle routing, and other areas. In this paper, I discuss the use of Microsoft Excel for network optimization. Reasons include explaining how to obtain better solutions for the network model. Because it is often difficult for humans to quickly identify a solution to a complex problem, I discuss the use of visual basic for applications (when human intuition identifies a solution from the network model). I also discuss the use of visual basic for applications (when human intuition identifies improved procedures in a network model). I discuss the importance of Visual Basic for Applications within Microsoft Excel. I show how to use VBA efficiently to draw objects.
