**Bush invaders of South-East Australia: a guide to the identification and control of environmental weeds found in South-East Australia.**

Author(s) : [Muyt, A.](#)

Editors : [Muyt, A.](#)

Book : [Bush invaders of South-East Australia: a guide to the identification and control of environmental weeds found in South-East Australia 2001 pp.xvi + 304 pp. ref.37](#)

Abstract : This book is divided into two sections. The first defines the problem and provides a key to the species. The second section provides detailed information on each species, including its distribution, biology, and control methods.

pose on South-East Australia's (mainly Victoria, Tasmania, South Australia and New South Wales) indigenous flora and fauna, and details the principles and practices of management and control (i.e. herbicide treatments, manual removal, woody plant methods, fire, slashing, biological control and competition strategies). The section comprises 93 environmental weed descriptions covering over 150 species, varieties and hybrids. Each description presents diagnostic characteristics, ecological information (i.e. morphology, reproduction and dispersal), specific control techniques as well as notes on indigenous species likely to be mistaken for them. Photographs of the species are provided.

Indexing terms for this abstract:

Organism descriptor(s) : plants

Descriptor(s) : biological control, chemical control, crosses, cultural control, dispersal, hybrids, identification, manual weed control, natural enemies, plant morphology, varieties, weed control, weeds, woody plants, woody weeds

Identifier(s) : biocontrol, weed trees and shrubs, weedicides, weedkillers

Geographical Location(s) : Australia, New South Wales, South Australia, Tasmania

Broader term(s) : eukaryotes, APEC countries, Australasia, Oceania, Commonwealth

Developed Countries, OECD Countries, Australia
