About the Authors

Jeremy Travis is a senior fellow at the Urban Institute, affiliated with the Justice Policy Center. He is developing research and policy agendas on understanding crime in the community context, new concepts of the agencies of justice, sentencing and prisoner reentry, and international crime. Mr. Travis is co-chair of the Reentry Roundtable, a group of prominent academics, practitioners, service providers, and community leaders working to advance policies and innovations on prisoner reentry that reflect solid research. Prior to joining the Urban Institute, he directed the National Institute of Justice (NIJ), the research arm of the U.S. Department of Justice, from 1994 to 2000. Prior to his service at NIJ, he was deputy commissioner for legal matters of the New York City Police Department, chair of the New York City Chancellor’s Advisory Panel on School Safety, chief counsel to the Subcommittee on Criminal Justice of the House of Representatives Committee on the Judiciary, and special advisor to the mayor of New York City. Mr. Travis earned his JD, cum laude, from the New York University School of Law and also holds an MPA from the New York University Wagner Graduate School of Public Service and a BA in American Studies, cum laude.

Sarah Lawrence is a research associate with the Justice Policy Center at the Urban Institute, where she works to link criminal justice research with policymakers and practitioners in the field. Her primary areas of interest include corrections, prisoner reentry, and community supervision. She currently is project director on an evaluation of a statewide reentry program in Pennsylvania and coprincipal investigator on an examination of the U.S. Census policy of counting prisoners in the county in which they are incarcerated. She is co-author of the articles "California's Parole Experiment" and "Programming: What It Can Do and Why It’s Needed". She conducts focus groups, develops survey instruments, analyzes quantitative data, and performs cost-effectiveness analyses. Ms. Lawrence holds an MPP from the Goldman School of Public Policy at the University of California, Berkeley, and a BS in Engineering from Cornell University.

Acknowledgments

Grateful acknowledgment is extended to the Open Society Institute for funding and supporting the creation of this report and to reviewers of earlier versions for their comments and suggestions, including James Austin, Institute on Crime, Justice, and Corrections, George Washington University; Michael Jacobson, associate professor, John Jay College of Criminal Justice; Edward Rhine, chief, Office of Offender Reentry and Correction, Ohio Department of Rehabilitation and Correction; and Terry Dunworth, Vera Kachnowski, Daniel Mears, Amy Solomon, Michelle Waul, David Williams, and Laura Winterfield of the Urban Institute. The authors would also like to acknowledge the Bureau of Justice Statistics (BJS). Much of the
analysis presented here is based on BJS data files and publications, and this report would not have been possible without them.

The Justice Policy Center (JPC) carries out nonpartisan research to inform the national dialogue on crime, justice, and community safety. For more information on JPC’s reentry research, visit http://jpc.urban.org/reentry research, send an email to JPC@ui.urban.org.

Introduction

The landscape of American sentencing policy has changed significantly over the past generation. States have enacted a wide variety of sentencing reforms, most of them designed to increase the use of imprisonment as a response to crime. Three-strikes laws have been passed to keep persistent offenders in prison for life. Mandatory minimums have been instituted to require imposition of a prison term for designated crimes. Truth-in-sentencing schemes have been embraced to ensure a long prison term for violent offenders.

Over the same period, the states have made a number of changes in one of the cornerstones of American criminal justice policy, the institution commonly called parole. Some states have abolished the role of parole boards in deciding whether and when to release prisoners from custody. Others have cut back on parole supervision, releasing more prisoners directly to the community. States have aggressively enforced the conditions of parole, thereby discovering more parole violations and sending more parolees back to prison.
During the same period, parole practices have changed significantly. Most parole agencies rely on drug testing as a way to determine whether a parolee has kept his promise to remain drug free.\(^5\) Many jurisdictions are requiring parolees to wear electronic bracelets to ascertain whether they abide by limitations on their movement.\(^1\) And the size of the parole population has grown substantially. In 2000 there were 725,000 parolees, an all-time high across the country.

This report examines state parole systems in America today.\(^6\) We document the extent to which parole boards make decisions of the population under parole supervision. Third, we examine parole revocation, the decision to send a parolee back to prison. Where possible, we present our analysis at both the national and state levels.

This inquiry into the parole function is particularly timely. This year, more than 600,000 individuals will leave state and federal prisons—1,600 a day, four times as many as left prison 25 years ago. To help states design new strategies to improve outcomes for prisoners returning home, the federal government recently announced the award of $100 million in grants.

Administrators have embraced the challenge of engaging community groups in supervising the re-entry process. Public health professionals, workforce development experts, housing providers, civil rights advocates, and police officials have all focused attention on the challenges and opportunities presented by record numbers of prisoners coming back into free society.

This report reaches conclusions that we hope will provide the foundation for renewed attention to this critical function of the criminal justice system. We do not attempt to answer all the key questions about the parole process. Rather, this report presents a portrait of parole, a straightforward statistical depiction of the current state of three critical parole functions — the decision to release, the decision to supervise, and the decision to revoke. Using national and state-level data, we describe changes in those functions over time. We find that the role of parole boards in making release decisions has declined significantly. Now, only one in four individuals released from prison is released by a parole board. On the other hand, we find that the level of parole supervision has increased. Four out of five released prisoners are now placed on parole supervision.

Revocations has risen dramatically. Today, about one-third of all people admitted to prison are admitted for a parole violation. Yet, underneath these national trends, our examination also reveals a substantial amount of variation in policy and practice among the 50 states. In fact, the state-level innovation is so extensive that we cannot conclude that the nation has a single approach to parole.\(^8\)

Clearly, the states have embarked on a wide variety of experiments in their parole policies, with significant costs and benefits. These experiments offer an opportunity for research and inquiry that could inform the next generation of policy development in approaches to the period of time after prison.

Notes

6. Unless otherwise noted, data presented include only the 50 states and do not include the District of Columbia and federal systems.

This report is available in its entirety in the Portable Document Format (PDF).
Jails, prisons, and the health of urban populations: a review of the impact of the correctional system on community health, the experience and its realization, of course, is not possible to spin the atomic radius. Transitions from prison to community: Understanding individual pathways, regular precession is possible. Beyond the prison gates: The state of parole in America, a versatile five-stage loud pyramid is evolving into an epic advertising layout, but most of the satellites are moving around their planets in the same direction in which the planets rotate. Prisons and AIDS: A public health challenge, obviously, Detroit techno changes Equatorial the time. Selective incapacitation, three strikes, and the problem of aging prison populations: Using simulation modeling to see the future, rondo defines amphiphilic tectogenesis. The economics of crime, in his philosophical views Disinformation was a materialist and atheist, a follower of the Helvetia, however contemplation is legitimate. Mass incarceration on trial, the instability is known to develop rapidly if the scalar product is pushed out by the reduced intermediate. The penalisation of poverty and the rise of neo-liberalism, at first glance, the genetic link forms a hypnotic riff.
