Abstract:

The Middle East and North Africa (MENA) have long been laden with tensions and instabilities. However, the recent uprisings, better known as the Arab Spring, have intensified volatility, turning this "hot-spot" into a veritable tinderbox where a small explosion has far-reaching national, regional and global implications. This review analyses and describes the events of the Arab Spring. It also examines the impacts and ramifications of the upheavals on the national, regional and international scene. The review argues that the Arab Spring has both changed and charged some of the region's thorniest problems - from political Islam to civil wars to rivalries between key regional powers. It raises important questions concerning the Arab Spring: were these uprisings a deceptive and transient phase of popular anger, or were they a genuine harbinger of a democratic transition? The review focuses also on the online networking and digital technologies as effective means of social activism to by-pass state owned media. Finally, the review offers an assessment of whether MENA is destined for a bright future or that political wisdom and prudence will prevail and save the region from the brink of destruction.
