Abstract

This investigation examined the reading behaviour of four children, aged 8, engaged in repeated readings of CD-ROM storybooks and hard-covered books. Using the measure of "search for meaning" miscues, we found that the on-demand mediation features available in CD-ROM books played an important role in promoting reading improvements in terms of a diminution of "search for meaning" miscues, and these gains were above and beyond those that may be expected from repeated readings of hard covered books. Cautions in interpreting the data, especially in terms of simply counting miscues from the computer recall list, also were presented.
