Anthropology (Cultural Heritage Option)

### Department or School/College

Department of Anthropology

### Committee Chair

Kelly J. Dixon

### Commitee Members

## Keywords

art, communication, historic, inscription, plains, rock

## Publisher

University of Montana

## Abstract

During the 19th and 20th centuries, emigrants on the Northern Plains engaged in a communication behavior that left messages carved, incised into the physical landscape. Often mingling with indigenous pictographs, this "rock art," the emigrants' messages are called "historic inscriptions." This information in the form of names, dates, text, and ideographs. This information is referred to as "residual communication" represents archaeological evidence of people who influenced and transformed environments and histories. The goal of this dissertation is to examine historic inscriptions on the Northern Plains to explore how these communication elements convey individual and group identities, and cultural values during a period of sudden and dramatic change in the region. This dissertation research asserts that historic inscriptions are a cultural resource that can provide information about topics such as the importance of self, and are literal signatures of colonialism via the Northern Plains rock art. While many publications have examined rock art, this dissertation is the first of its kind to systematically examine historic inscriptions on the Northern Plains as a cultural resource.
