Farm management pocketbook.

Author(s) : [Nix, J.](#) ; [Hill, P.](#)

Author Affiliation : Dep. Agric. Economics, Wye College, Ashford, Kent, UK.

Book : [Farm management pocketbook](#). 1986 No.Ed. 17 pp.192 pp.

Abstract : Most figures in this 1987 edition have been updated compared with the 16th 1986 edition. A number of additions and changes have been made to include red deer, rainbow trout, pheasant rearing and a section on conservation. Parts expanded include beef, forage costs, poultry, interest charges and 'agribusiness' buildings and herbage seeds sections have been completely revised. Almost all the data in 20 years there are marked reductions in some costs, particularly for feedingstuffs and fuel. Nevertheless, the gross margin for wheat for 1987 is only a level little more than half that of 10 years before (1977) in real terms, despite

of) the yield level being nearly 50% higher. The years of 'up corn' have come to an end, for the time being at least, and 'down horn' prevails also. The 1987 estimate of return on tenant's (i.e. farming) capital is 6% compared with 15% 10 years ago. Figures are predicted forward one year, i.e. to 1987. Thus the crops data relate to the 1987 harvest, i.e. the 1987/88 marketing year (N.B. not just, in the case of price, those prevailing at or just after harvest time). The livestock data relate either to the calendar year (e.g. for milk production) or to 1987/88 (e.g. for winter fattening) where appropriate. The estimates were made during the first half of the summer (in a few cases current (i.e. mid-1986) figures are given, where it seemed particularly appropriate to forecast ahead. The year to which the figures relate is normally stated). Stages of preparation problems arose over sudden major changes in fertilizer prices. Reduced levels announced in late June/early July 1986 were allowed for, but not further reductions in nitrogen prices that followed. The figures for yields are based on a 'normal', or average, season based on trends.
