Flora Europaea. Vol. 2. Rosaceae to Umbelliferae.

Author(s): <u>TUTIN, T. G.</u>; <u>ET AL.,</u> Editors: <u>TUTIN, T. G.</u>; <u>ET AL.,</u>

Book: Flora Europaea. Vol. 2. Rosaceae to Umbelliferae. 1968 pp.xxvii + 455 pp.

Abstract: Vol. 1 of what can legitimately be considered as the major flora o period appeared in 1964 [cf. XXXV, 1370] and its general characteristics wer enthusiastically described in our earlier review. Vol. 2 covers the Englerian c (final section), Geraniales, Rutales, Sapin-dales, Celastrales, Rhamnales, Mál Thymelaeales, Guttiferales, Viólales, Cucurbitales, Cactales, Myrtales and Ur Vol. 1 was based on the eleventh edition of Engler's *Syllabus*. The twelfth edition

appeared in 1964 and the present volume is based on this. This involves a since the Cactales 'and Guttiferales would have found their place in Vol. 1 have edition of the *Syllabus* appeared earlier.

The editorial committee has been augmented by the addition of D. M. Moor Ferguson has been appointed as an additional research assistant. Amongst editors, A. A. Federov replaces B. K. Siskin, representing the USSR. It is gratil of the financial support for this botanical venture from such general scientif the Royal Society, London, and the Spanish Higher Council for Scientific Rese of standard floras cited after the introduction and forming the source for the has been somewhat extended.

Again, the value of *Flora Europaea* for plant breeders is mainly indirect but a genera whose wild species are of significance in economic crop breeding at These include *Rubus*, where the agamospecies are reduced to some kind c clustering around a circle species which is alone keyed and described, and a *Vicia, Melilotus, Medicago, Trifolium* and *Lotus*. As before, incidental allusion cultivated species, including a rather perfunctory account *of Citrus*. The imp the forms of *Cucúrbita pepo* grown as vegetables are vegetable marrows is misleading.

The publication of the *Flora Europaea* is a timely reminder that the cultural u is not wholly lost. The flora should be accessible to anyone whose thinking national boundaries.
