MRI and CT atlas of the dog. [Magnetic resonance imaging and computed tomography].

Author(s) : [Asshauer, J.](#) ; [Sager, M.](#)

Author Affiliation : Dr. J. Asshauer, Genovevstrasse 24, D-51065 Köln, Germany.

Book : [MRI and CT atlas of the dog. \[Magnetic resonance imaging and computed tomography\]](#). 1997 pp.xiv + 482 pp.

Abstract : The normal anatomy of the dog is presented in over 1200 scanned cross-sections of parts of the body. Captions to the illustrations are in the standard anatomical nomenclature, with introductory chapters in English (which also r

applications). Computed tomography was suitable for bony structures, while resonance imaging was best for soft tissues. The principles of these techniques are described in an appendix. As an example of the detail of coverage, the chapter on the spine covers 98 pages, is subdivided into 7 regions, and has 391 illustrations of transverse and longitudinal sections.

ISBN : [3894121645](#)
