Publisher Summary

This chapter focuses on financial support for research and education in the areas related to toxicology. There is a need to support and fund basic and applied research, educational opportunities, and activism at the grassroots and community level. Our understanding of the complexities of living organisms to toxic exposures expands rapidly and is now being studied at molecular levels only speculated a decade ago. As during other eras of great exploration there remains a constant need for funding and support for the research spawned from the initial ideas and stimulations of that exploration. Many libraries and information centers maintain in their collection a cadre of resources to assist individuals and organizations seeking grants and funding and the process of preparing proposals and other solicitations for grants and other opportunities for funding. Library of Congress Subject Headings for locating books about grants and grant writing include fund-raising, grants-in-aid, medical care research grants, and proposal writing for grants.
