cartooning should be taught in visual arts classrooms supported by historical research, professional inquiry research, and analyses of pedagogical approaches. Johnson's history of the U.S. comic book industry from its beginning in the Depression, through the anti-comics movement of the 1950s, to the dominated comic shops of the '70s, and the eventual comics boom of the '90s. She uses the personal narrative of her engagement with comics as a child in the '90-'00s as a lens to explain the current flourishing graphic novel industry and the importance of literature in education; literacy is not just for the purposes of reading, but for understanding and connecting with the world. Research shows that children of marginalized communities are being underserved and neglected by their schools. Educational methodologies and the content of available literature for these experiences already align with the majority. The thesis describes the benefits of intertwining the visual and verbal modes of play to the strengths and competencies of children and their experience. Images and words together clarify complex concepts and illuminate possibilities. To conclude, this thesis summarizes the outcomes of sample cartooning curriculum and how it can be expanded. Future work building on the research presented here will include lesson plans that put theory into practice.
