### Abstract

Although scientists, politicians and humanists have long debated the role of backyard gardens in improving nutrition and food supply, little is known about indigenous home gardening. This research report discusses historical significance, nature, and function of home gardens and undertakes a cross-cultural review of the literature. Finally, it offers a definition and policy-relevant typology of household gardens based on ecological and socio-economic determinants. Despite increasing attention given by agricultural research organizations to small-scale farmers, household gardens are still neglected as an important subsistence strategy.
