Robert Russell, Ph.D.

Committee Member

Ashley R. Wilson

Abstract

Drayton Hall, an early eighteenth-century plantation house on Charleston, South Carolina, is widely considered to be the first in the United States. Now owned and operated by the National Trust for Historic Preservation, Drayton Hall is something of a laboratory for the study of architectural history, architecture, material culture, social history, and historic preservation. As discoveries are made almost every day at Drayton Hall, the origins of many of the objects that remain unknown.

In 2009, the Drayton Library Catalog was discovered within the collection containing references to seven popular eighteenth-century architectural books. By comparing measured drawings of Drayton Hall to the seven books, this project examines the origin of the house's design in the published sources that would have been available at the time of its construction. Some of the books discussed have been previously identified as sources for this project led to the discovery of a correlation between a particular executed design from one of the seven books in the Drayton Library Catalog.

The scope of this project was limited to the seven books in the Drayton Library Catalog previously identified sources. For that reason, measured drawings of the house were included so that this document may be a tool for future studies of this project.
