Anatomy and histology of the eye and orbit in domestic animals.

Author(s) : [Prince, J. H.](#) ; [Diesem, C. D.](#) ; [Eglitis, I.](#) ; [Ruskell, G. L.](#)

Book : [Anatomy and histology of the eye and orbit in domestic animals.](#) 1960 pp

Abstract : Increasing knowledge of the anatomy of domestic animals has not changed from the omnibus standard textbook containing some information common to all species. The choice then falls between textbooks devoted to all the systems of all species and those devoted to one system of all species. This book is in the latter category and its 300 pages are crammed with details which could not be contained in a standard textbook.

Just under a quarter of the book gives a general description of the eye and in the remainder the domestic species are dealt with individually. It is profusely illustrated with photographs, some of which are disappointing, and diagrams which are excellent. The bulk of the observations are original although a bibliography is included. However, it is difficult to think who will use this book apart from veterinary institutes of ophthalmic research, since the profession generally tends to form societies devoted to species rather than to systems.

The publishers have made a very pleasing production and all concerned are to be congratulated on this venture, which must be a very risky one, of producing a book on the anatomy of one system especially as the book is quite expensive. However, anatomists will certainly appreciate it.-R. N. SMITH.
