Parasites and diseases of fish cultured in the tropics

Book : [Parasites and diseases of fish cultured in the tropics](#). 1985 pp.318pp.

Abstract : There is at the moment an increased demand for animal protein playing a major part in meeting some of this demand. To increase fish production, aquaculture is practiced in many parts of the world. However, parasites and diseases are the most serious limiting factors in aquaculture because of the increased density of cultured fish populations in restricted bodies of water and the ease by which they can be transmitted from one fish to another. Much of the economic loss is, I

preventable with proper fish health management. Control measures have been developed and tested but unfortunately most of these are applicable to the temperate regions. This book, dealing with parasites and diseases of cultured fish in the tropics is timely and should find a ready audience.

The book draws on the experience of the First Tropical Fish Disease Workshop in Indonesia in 1978 and is aimed at the Indo-Pacific region of South-East Asia. The author combines his personal experience with literature searches and contributions from fish workers in the area and has produced a useful book. The book consists of 10 chapters, 5 of general character and some dealing with more specialized topics. There are chapters on fish anatomy, diagnosis, prophylaxis and therapy, diseases and parasites. In addition there is a list of books and papers for recommended reading, 6 pages of references quoted in the text and an index.

As the tropical environment is poorly studied and certain to contain many unknown pathogens, the author places emphasis on the general chapters and points out that the remaining chapters are not comprehensive catalogues of the pathogen species in the area. However, some illustrations and keys are provided to guide the users in the identification of some of the likely organisms.

This book is a general practical guide to all aspects of diseases of fish culture in the tropics. ~ L.F. Khalil.
