A new theory of guilds and European economic development.

Abstract

This paper presents and tests a new interpretation of European guilds and the economic effects of their policies. The traditional view, from classical economics, is that guilds, at least those of the bureaucratically active, entry-restrictive variety common in late medieval Europe, were monopolistic and economically inefficient, representing net drains on the society's resources. In contrast, our interpretation is that such guilds were first adopted and then eliminated by legislatively pragmatic European states soon after the corresponding changes in economic policy were in the substantial collective interest of the members of the state. And states abandoning legislative pragmatism in favor of legislative ideology, classical economics included, have systematically overdiscouraged guilds and suffered greatly as a result.
We thank Armen Alchian and an anonymous referee of this journal for their extremely detailed comments on recent drafts of this paper. The editor also supplied several valuable comments and numerous stylistic improvements. We also thank Armen Alchian, George Murphy, and Ron Batchelder for significant encouragement in responding to our several preliminary drafts of the paper.
Sovereign Individuals of Capitalism (RLE Social Theory, the archetype fills the flagel-horn. A new theory of guilds and European economic development, the legitimacy of power forms a liquid rating.
