AbstractAbstract

[en] The yearbook of forest statistics provides statistical data about recent developments in forestry and the forest industries in Finland. A major part of the data refers to the years 1990 and 1991. Some of the information is presented as figures and in the form of long time series. A few of the main concepts and definitions used in the book are briefly explained. Some analyses of past trends are also present. The yearbook consists of 13 main chapters. Most of the tables and figures are connected with forestry. Emphasis is put on forest statistics concerning forest resources, forest health, silvicultural and forest improvement work, roundwood markets and the labour force. As regards the forest industries in Finland, the book provides information on e.g. production and foreign trade, wood consumption, investments profitability and the labour force
