Book : [Laboratory techniques in biochemistry and molecular biology. Volume 1.](#) 572 pp.

Abstract : The volume is in three parts Electrophoresis of proteins in polyacrylamide starch gels, by A. H. Gordon (pp 1-149); An introduction to gel chromatography [columns and thin layers]. by L. Fisher (151-396); Immunochemical techniques for the identification and estimation of macro-molecules, by J. Clausen (397-572). TI

of both theoretical and practical aspects of these techniques is sound and the accompanying figures and photographs are excellent. The reference lists are exhaustive but are presumably sufficient for most people: each part has its own index. The manual should be welcomed as a good introduction to the techniques, a useful reference during laboratory work. However, its price is formidable, but cheering to see a publisher take such care over the quality of printing, similar books have been published at much lower prices without great loss in clarity or general accuracy.
