Summary

This study investigated the efficacy of a program of vocal hygiene education designed for an occupational group at risk for dysphonia, namely, kindergarten teachers. Twelve female teachers explored concepts and knowledge of vocal abuse and vocal hygiene in a workshop session and attempted to practice vocal hygiene for 2 months. They showed significant voice improvement as assessed instrumentally in terms of three acoustic and electroglotto-graphic parameters. There was no significant change of voice in a control group of 13 teachers. The results suggest that teachers were able to improve their voices if they significantly reduced vocal abuses in daily life and practiced specific
