 **Textbook of Parasitology.**Author(s) : [BELDING, David L.](#) ; [M. D. J.](#)Book : [Textbook of Parasitology](#). 1965 No.3rd Edition pp.v + 1374 pp.

Abstract : More than ten years have elapsed since the second edition of the comprehensive volume on parasitology appeared [this *Bulletin*, 1953, v. 50, author has taken the opportunity thoroughly to revise the text, while special sections devoted to diagnosis and treatment, under the authorship of A. MARSTON. The book has an essentially practical outlook, so that the physician, epidemiologist or parasitologist will quickly find what they need to know about the symptoms and life cycle of the parasites, respectively. Infections purely of veterinary interest are either described very briefly (*e.g.* piroplasms or *Hcemonchus*) or omitted (*e.g.* flukes). Nevertheless, an extraordinary range of organisms is covered in or

another, and the vital inter-relationships are made apparent. Bacterial, rickettsial, spirochaetal and viral diseases receive a little attention in the section devoted to arthropods, but details of their morphology, diagnosis and treatment are partly missing; the author had to draw the line somewhere.

The book includes 3 principal divisions: protozoa (300 pages), helminths (45 pages), and arthropods (200 pages), and each chapter is followed by a modern bibliography, earlier references being largely omitted, in order, presumably, to save space. It is desirable in the circumstances to mark with an asterisk those references which themselves contain an extensive bibliography. General chapters are devoted to parasitism, pathology, immunity, and transmission which form useful summaries of aspects of the subject. Of great practical value are the chapters on insecticides, chemotherapy, biochemistry and diagnostic methods.

Copious line drawings illustrate the text, and are more useful than the much fewer photomicrographs. Numerous tables are provided, for the differentiation of species, to summarize special features, and to set out systems of classification. The format is exceptionally clear. *P. C. C. Garnham.*
