Abstract

œ Landscape planners are quick to criticise other professions for single-use planning, but we tend towards the same mistake when planning greenways and urban greenspace. This proposition is illustrated by the great series of open space plans which was prepared for London between 1929 and 1976. It is then discussed from a theoretical standpoint with reference to Christopher Alexander, the ~pattern analysis™ approach to landscape planning, and the author's 1991 report to the London Planning Advisory Committee, *Towards a Green Strategy for London*. The paper concludes that ~greenway™ is an excellent marketing term, but that product diversification and product differentiation must take place. We need special varieties of greenway for special purposes. Brief Alexander-type patterns are outlined for seven varieties: parkway, blueway, paveway, glazeway, skyway, ecoway and cycleway.
