Book: Sacred trees, bitter harvests: globalizing coffee in Northwest Tanzania 20

Abstract: In north-western Tanzania, coffee is much more than a drink. Colonial and post-colonial relations have long been intertwined with coffee. The medium tangibly connects Haya men and women to the wider world of international commodity exchanges. Efforts to develop and expand production in the region's Haya communities have been a major concern of international and local agencies, 19th/early 20th century missionaries who introduced new varieties of coffee,
farmers, to contemporary field extension officers who promulgate new cultivation techniques. Coffee is an agricultural product and a consumable commodity subject to local and global uses and interpretations. The dynamic relationships of specific local and global understandings of value as manifested in the coffee of rural Haya are explored, offering critical insight into the significance of developments in colonial and post-colonial periods in this region of Africa. Furthermore, the ultimate use of Haya produce raises important questions about the values of a "global economy" and the extent to which it effectively integrates regional worlds.
