Haygarth, Nic
Abstract: Tasmania's 170-year-old coal-mining industry has never been rich. Thin seams, low quality and often poor access have ensured that local coal struggled to compete with that imported from mainland Australia, particularly from Newcastle. There have been only two significant Tasmanian coalfields: the Lower Permian beds of the Mersey River and Don River area; and the Triassic beds of the Fingal-Mount Nicholas field. The Cornwall Coal Company, based in the Fingal Valley, is now Tasmania's sole supplier of coal for general and industrial purposes.
