### Abstract

This paper examines features of child labor in an area of high economic growth in western India. Growth was associated with an increase in the number of child workers over the last 15 years. The analysis shows that children work at simple repetitive manual tasks that do not require long years of training or experience. The work is low-paying, involves drudgery and is hazardous. Work forecloses the option of school education for most children. In this context, I argue that economic growth alone is not sufficient to eradicate child labor.

I am very grateful to the Society for Promotion of Area Resource Centres (SPARC), Mumbai, for giving me access to this data set, and in particular, to Tara Ramkumar of SPARC who undertook the preliminary data analysis and provided background materials. I have benefited from discussions with Tara Ramkumar and have drawn on joint work with her. Vikas Rawal gave able research assistance. I thank V. K. Ramachandran for his comments.
