 **Pig diseases.**Author(s) : [Taylor, D. J.](#)

Author Affiliation : Dep. Vet. Microbiol., Glasgow Univ., UK.

Book : [Pig diseases.](#) 1979 pp.176pp.

Abstract : The author deals, in the space of 157 small pages, with 128 diseases. This might have indicated cursory treatment of the subject, with insufficient detail as a pleasant surprise to find that the book approaches perfection. According to the Preface, the writing was intended for student notes and to be used in conjunction with A.B.P.I. Data Sheets and Dunne & Leman's "Diseases of Swine". This may be true; itself, the book would be invaluable for all who deal with pig diseases. Most diseases of any importance (rabies, foot and mouth disease and tumours are omitted) are dealt with under the headings: Definition, Aetiology, Pathogenesis, Clinical Signs, PM L

Epidemiology, Diagnosis, Treatment and Control. In every case, the information seems to be sufficient for practical purposes. This, with a short and sensible and an appendix containing a beautifully thought-out scheme for easy diagnosis completes a book which should be in the library of every practising veterinarian and veterinary student.

Record Number : 19792240730

Publisher : 31 North Birbiston Road.

Location of publication : The author, Lennoxton, Glasgow G65 7LZ

Country of publication : UK

Language of text : English

Language of summary : English
