Publisher Summary

This chapter describes how a native signer teaches in a preschool classroom with five deaf children who entered with minimal communicative competence. None of the children had acquired linguistic skills, either in sign language or in English, before entering school at the age of three. This chapter presents the review of a story, Three Little Kittens that had been read to the students. In this review, the teacher does not read the story but rather asks the children about the story. The study demonstrates how the teacher helps the students adapt to the classroom situation. It specifically focuses on how the teacher uses questions; elicits answers; responds to answers; uses classifier predicates, role playing, and miniature signs; adapts signs to the specific actions depicted in pictures; and changes English words that show sound-related concepts to signs that show visual concepts. The findings suggest that to communicate effectively with those students who are prelingually deaf and have minimal language competence, a teacher

must be competent in the use of different forms of American Sign Language (ASL).
