Publication Date

1-1-1983

Abstract

In an effort to learn the extent and variety of factors that influence students' book selection, the study reported here was undertaken. The researchers also questioned students regarding what they liked to read about, what authors they liked, and books they had recently read and enjoyed. A total of 688 fifth through eighth grade students enrolled in public schools in two small cities in Nebraska and California responded to a questionnaire. Numbers of respondents from both sexes were fairly evenly distributed across four grades.
