 **Textbook of microbiology.**Author(s) : [BURROWS, W.](#)

Author Affiliation : Professor of Bacteriology, University of Chicago.

Book : [Textbook of Microbiology](#). 1954 No.16th Edit pp.xix + 824 pp.

Abstract : This is the sixteenth edition in 46 years of a textbook which has become popular, sound and well produced. Beginning with a chapter on the history and development of microbiology, it goes on to deal with bacteria and bacterial epidemiology, and the special bacteriology of water, sewage, milk and food. Chapters on fungi, spirochaetes, parasites of medical importance (protozoa, rickettsia, viruses and bacteriophages). Almost every page carries references to literature in the form of footnotes, and the text is illustrated with an abundance of excellent figures which include many fine electron photomicrographs. Three

specialists-a virologist, a parasitologist and a biochemist-have contributed to dealing with their own fields of work, but in the main the book represents their own labours.

The emphasis throughout is on microorganisms of medical importance, but with many references to disease in animals and these are concise and accurate. It contains more detail than medical students require and not enough for the research worker in a narrow field: its special virtue is the broad picture it gives of the whole subject at a standard appropriate to the advanced student and with a selection of key references to every subject with which it deals. The text shows signs of very careful editing and proof correction, and errors are rare. The reference to Figure 30 in the text (page 211) should, however, be to Figure 29: there is need for a reference to Figure 30.

This is a book which can be confidently recommended to microbiologists even to G. WHITE.

Record Number : 19552201841

Publisher : Philadelphia (& London): W. B. Saunders Co.

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Organism descriptor(s) : fungi, man, protozoa, Rickettsia, viruses

Descriptor(s) : animal diseases, bacterial diseases, bacteriology, books, epidemic diseases, microbiology, microorganisms, parasites, research workers, sewage, students

Identifier(s) : bacterial infections, bacterioses, bacterium, fungus, Metazoa, microorganisms, research personnel, researchers

Broader term(s) : eukaryotes, Homo, Hominidae, primates, mammals, vertebrate animals, Rickettsiaceae, Rickettsiales, Alphaproteobacteria, Proteobacteria, Bacteria
