Traditionally, Americans have sought to realise the American dream of success, fame wealth through thrift and hard work. However, the industrialisation of the 19th and 20th centuries began to erode the dream, replacing it with a philosophy of "get quick". A variety of seductive but elusive strategies have evolved, and today the leading ways to instant wealth are large-prize television game shows, big-jackpot state lotteries and compensation lawsuits. In this article, Matthew Warshauer, Professor of History at Central Connecticut State University, examines why so many Americans persuaded to seek these easy ways to their dream.
Rags to riches the traditional way: through thrift and hard work

Instant wealth has not always been a major component of the Dream. During the Colonial Period, Benjamin Franklin counseled people on the "The Way to Wealth." He advised that "Early to Bed, and early to rise, makes a Man healthy, wealthy, and wise." The key to wealth was industry: "Industry pays debts," insisted Poor Richard.[4] Americans of the Early Republic expected that the goal was not extravagant wealth, but, rather, economic independence and the opportunity for social advancement through financial gain. Abraham Lincoln insisted that the greatness of the American system was that prudent, penniless beginner in the world, labors for wages awhile, saves a surplus with which to buy tools or land, then labors on his own account another while, and at length hires another new beginner to help him. This...is the just and generous, and prosperous system, which opens the way for all."[5]

In the midst of industrialization following the Civil War, many Americans experienced profound hardship in the changing economic landscape. They found solace in the tales of Horatio Alger, whose characters overcame adversity through industry, perseverance, self-reliance, and self-discipline. The ubiquitous "rags to riches" legend became a cornerstone of American society; anyone could succeed and achieve wealth if they worked hard.[6] The commitment to industry and Franklin's practical maxims were further solidified in the American mind by the addition of a religiously based, Protestant "work ethic."[7] Many believed that hard work allowed one to not only achieve financial success, but, through that success, revealed God's grace.

Numerous scholars note that the shift away from the traditional American work ethic corresponded directly with the rise of industry. Work values changed dramatically when the assembly line production and machine-driven atmosphere of industrial America swallowed up skilled workers.[8] The aftermath of World War II exacerbated the ethical shift as a consumer culture blossomed and Americans became more preoccupied with material goods. As one critic noted, "consumed by desires for status, material goods, and acceptance, Americans apparently had lost the sense of individuality, thrift, hard work, and craftsmanship that had characterized the nation."[9]

The result of this shift in work ethic has actually spurred rather than lessened the people's desire to achieve the American Dream. Yet the real difference is that the Dream has become more of an entitlement than something to work towards. Many Americans no longer entertain a vision for the future that includes time, sweat, and ultimate success. Rather, they covet the shortcut to wealth. Many who are engaged in work view it more as a necessary evil until striking it rich. This idea has been perpetuated by a massive marketing effort that legitimizes the message that wealth can be obtained quickly and easily. Whether through the television entertainment industry, state-based lottery marketing drives, or legal advertisements, Americans are told again and again that the road to the financial success of the American Dream is more a matter of luck than hard work.

Who wants to be a millionaire?

Little reveals the shift in the quest for the American Dream more than the immensely popular television game show, "Who Wants to Be a Millionaire," hosted by Regis Philbin. With an average two hundred thousand people per calling on "Contest Day" attempting to become contestants, and a twenty-nine million per show viewing audience, it is safe to say that Americans are captivated by what many consider to be an easy avenue to achieving financial success. The very title of the show capitalizes on the core of the American Dream: wads of cash. The question, "Who Wants to Be a Millionaire?" is a no-brainer. The American desire to be rich is at the very heart of our nation's capitalist economy. The show's producers have simply tapped into a value already prevalent in today's society. In doing so, the show has become both a reflection of and a catalyst to greed and materialism.
with what at times seem to be amazingly easy questions.\[11\] Five players have won the top prize in 2001. Dozens have won upwards of $1,000,000. "Who Wants to Be a Millionaire" is successful because the average viewers see themselves as potential winners. One does not need to be a "Jeopardy" brainiac to answer what word was spelled backwards on the mirror in the movie "The Shining." It was "murder" of course. Or, even more simple, what do the rings on the inner part of a tree signify?

The large jackpots and relative ease of "Who Wants to Be a Millionaire" shows of the past generally provided new appliances, trips, or cash \[302\] through retirement. Being a millionaire today reminds one of the world hostage and demands "one million dollars," only to be told the figure to "one hundred billion dollars."

If the amount won on "Who Wants to Be a Millionaire" does not really meet the perceptions of the American Dream, the means of achieving the money are even more questionable. Where, one might ask, are the work ethic and industry inherent to the traditional conception of the Dream? Some might argue that it takes a degree of intellect and knowledge to win the game, thus some work, that needed to gain knowledge, does exist. Yet such an argument is inherently weak because of the safeguards in the game, as well as the many instances of chance in advancing to the final round. In the course of play, every contestant has three "lifelines" designed as an aid in choosing the correct multiple-choice answer. The player can choose "Fifty-Fifty," in which the computer eliminates two incorrect responses, leaving only two possible answers; "Ask the Audience" allows the player to quiz the studio audience for the most likely correct answer; "Phone a Friend" enables the player to telephone one of five pre-arranged contacts who help to determine the correct response. All of these devices take the weight of knowledge off the contestant, and thus provide a real degree of luck. It certainly does not come close to the level of knowledge one must amass in order to compete in a show like "Jeopardy," on which there are no multiple choice questions and a contestant is on his or her own. Moreover, there exists a great deal of chance to even make it into the final round.\[12\]

"Who Wants to Be a Millionaire's" success is directly related to the belief that anyone with a little knowledge and lot of luck can be a millionaire. Such a message resonates with the mass of people specifically because it seems accessible. In the process, the most basic, traditional means of achieving the Dream, industry, has been eradicated. Poor counsel to engage in "industry" is unnecessary in such a schema. No hope for some luck and you might win a prize."

The success of "Who Wants to Be a Millionaire's" ability to capitalize on the American Dream has spawned a series of copycat shows. "Greed," Twenty-one," and, perhaps most interestingly, "Who Wants to Marry a MultiMillionaire," have utilized the same basic, capitalist American urge for hoards of money. The theme of the latter show is especially amazing. On February 15, 2000, Rick Rockwell, an independent real estate investor, picked from among fifty female contestants who agreed to actually marry a "multimillionaire" if chosen. This Fox Television "epiphany" was the brainchild of executive Mike Darnell who stated that, "the money is a cutesy motivational factor. I think mostly people are looking for a relationship." A room nurse named Darva Conger, claimed that neither was her goal. She simply wanted a free getaway to Las Vegas, where the show was broadcast, and to "be on TV and wave to my family and friends." "It was just a lark," insisted Conger. I "was just in complete...
shock” when I won. When Matt Lauer of the Today Show pressed her, insisting that money must have been a major factor in participating on the show, Conger claimed it was not, even though she walked away with a free Caribbean honeymoon, a $35,000 engagement ring, and an Isuzu Trooper. The prizes totaled some $100,000. Even though Conger has vehemently denied charges that money was a key motivation, and had her marriage with Rockwell annulled, she has since posed for what some report is upwards of $400,000.

Whatever Conger's motivation, it is abundantly clear that many women jumped at the opportunity to achieve the American Dream through a quickie marriage on a nationally broadcast show. Follow the Fox web site crashed after it was flooded with requests from women to participate on a subsequent episode. Following the initial airing of “Who Wants to Marry a Multimillionaire,” the Fox web site crashed after it was flooded with requests from women to participate on a subsequent episode. The rating success of 23 million viewers was greeted with disdain by critics who charged that “the Fox program was dedicated to the proposition that people will do anything for money, that, in fact, money is everything.”

Many viewers surely tuned into "Who Wants to Marry a Multi-

millionaire," offering a huge cash prize that had both psychological and spectacle appeal. The contestants needed only a pretty face and a voluptuous body. Like Regis Philbin through industry, was eliminated.

"Who Wants to Be a Millionaire" and similar game shows are only the latest in capitalizing on the American Dream. Even more well known, and often more lucrative are state run lotteries. All one needs is "A Buck and a Dream," boasts the New York Lottery. Just as in the game shows, the lottery focuses on the hope of easy money with minimal effort. One does not need to work hard in order to choose a series of numbers. In the lottery scenario, one works for a living only until they hit that big Lotto or Powerball score. The Illinois Lottery's advertisement in a Chicago ghetto encouraged, "This could be your ticket out."

Whereas the payoffs for the big jackpot lotteries are significantly higher, the odds of winning are equally long. With an average of 1 in 12 to 14 million chance of winning, and 1 in 80 million for the big prizes, the degree of luck needed is astronomical. Still, Americans flock to the lottery when the possibility of scoring big is most remote. In 1998, a 300 million dollar jackpot caused thousands of New Yorkers to flood across Connecticut state lines. Greenwich, Connecticut stores had lines 500 people long waiting upwards of 6 hours to purchase tickets. Forced to deal with traffic gridlock and disorderly conduct, the town was forced to spend some $80,000 for police and other emergency services. During the same Powerball drawing, the New Hampshire Lottery executive director held a press conference requesting people not to spend beyond their limits. Notwithstanding such warnings, one man admitted dishing out $3,000 for tickets.

The Powerball and Lotto frenzy is easy to explain: most everyone believes in that winning is a long shot, they nevertheless fantasize about the possibility of winning the American Dream. It is the state lotteries' ability to capitalize on this fantasy that makes them so successful. Operating in 37 states and the District of Columbia, lotteries sales for 1996 totaled 42.9 billion dollars, 38% of which was net revenue, making lotteries by far the most profitable form of gambling. Most gambling venues pay back about 90% of what they take in, whereas lotteries pay out only about 50%.

Yet lotteries have been around for literally hundreds of years. America was created with their help. In 1612, the British crown authorized the Virginia Company of London to hold a lottery to aid the Jamestown colony. During the colonial period and after, Americans held lotteries to raise funds for internal improvements and defense.
do they influence the traditional meaning of the American Dream?

The simple answer is advertising. State lotteries have learned the importance of effective, comprehensive marketing. Until 1975 the federal government prohibited states from advertising, but since the ban was lifted lotteries have developed sophisticated, targeted promotions.

In 1997 they spent 400 million dollars marketing the various Lotto and instant games, an amount that doubled the percentage spent on advertising by most corporations. Yet it is not merely the sheer scope of the advertising, but, rather, its effectiveness. Many critics argue that lotteries target poor groups who are least economically able to cope with the expense. In doing so, states are capitalizing on those who are perhaps most in need of realizing the American Dream. The Ohio SuperLotto game, for example, suggested in its advertising plan that "promotional 'pushes' be targeted as early as possible in the month. Government benefits, payroll and Social Security payments are released in the first Tuesday of each calendar month. This, in effect, creates millions of additional, non-taxable dollars in the local economies of which the majority is disposable."

The Illinois Lottery engaged in an equally calculated strategy to entice an economically depressed neighborhood in west Chicago. Renting space on 40 billboards, the state promised, "How to get from Washington Boulevard to Easy Street." The advertisement's implicit "rags to riches" message played on the most core aspect of the American Dream. And studies show that such promotions work. The poor spend a larger percentage of their income on lottery tickets than the more affluent.

Just as significant, the lotteries purposely mislead players about their chances of winning. One study found that 70% of television advertisements portrayed people winning. Moreover, the study noted that states purposely disguised the odds and, in fact, gave the impression that there existed a good chance of winning. Even some government officials have grown concerned about such tactics. In 1997, New York Governor George Pataki requested lottery officials to "tone down" their "Hey, you never know" promotion, and added that lottery marketing should avoid "raising unrealistic expectations."

Deceptive commercials? Of course, the Federal Trade Commission has "truth-in-advertising" standards. Yet because lotteries are state entities they are not bound by the same requirements to which private entities are not bound by the same requirements to which private businesses must comply.

Thus lotteries are free to spend hundreds of millions on what is often disingenuous advertising specifically designed to manipulate people's quest for the American Dream. As one author noted, "the lottery, it is said, exploits people's yearnings for a better life, offering them a sucker bet wrapped in promotional hype." Another critic agreed, arguing that, "in short, lotteries may undercut the ethic of work and achievement, replacing it with an ethic of luck."

Similar to the "Millionaire" game shows, one of the key components to realizing the American Dream is luck. Once again, Americans are sent a message that success can be achieved, not through industry, but, rather, via chance. Nor have critics of the lotteries missed this phenomenon. Michael Sandel insisted that lotteries send "a message at odds with the ethic of work, sacrifice and moral responsibility...." Instead, people are told that "with a little luck they can escape the world of work to which misfortune consigns them." Another critic agreed, arguing that, "in short, lotteries may undermine the ethic of luck."

Yet lotteries, in fact, do even more. They play both on the ethic of luck -- that skill is a component of winning. The National Gambling Impact Study Commission noted that lottery advertising specifically sought to persuade players that they could influence their odds through the choices of numbers they pick. Moreover, there are a plethora of books that promise to teach the would-be lottery winner how to win:

Win the Lottery; The Basics of Winning Lotto; Lottery; How to Win: More through hard work one can develop the skill necessary to win the lottery. With such a message one might argue that the American Dream is alive and well,
Franklin’s traditional ingredient, is realized through calculation and truth. The lottery is unquestionably random. One needs only a buck, game shows, state lotteries, through carefully targeted advertising, have opened a path to fulfilling the American Dream.

If game shows and lotteries have seemingly opened a path to fulfilling the American Dream, so too has the proverbial “million dollar injury.” Litigation is as American as apple pie, though it does not leave one with a sweet taste in the mouth. Indeed, many view the legal profession with disdain, especially personal injury lawyers whose ubiquitous “have you been involved in an accident? You may be entitled to compensation” advertisements encourage the public to believe that easy money can be had. Such “ambulance chasers” have spawned hundreds of lawyer jokes. “What’s a million lawyers at the bottom of the sea? A good start.” Such humor, though laughed off in passing, says something about the legal profession in the eyes of the public.

The operation of the tort system is akin to a lottery. Most crucial criteria for payment are largely controlled by chance: (1) whether one is lucky enough to be injured by someone whose product or conduct can be proved faulty; (2) whether the party’s insurance limits or assets are sufficient to promise an award or settlement commensurate with losses and expenses; (3) whether one’s own innocence of faulty conduct can be proved; and (4) whether one has the good fortune to retain a lawyer who can exploit all the variables before an impressionable jury, including graphically portraying whatever pain one has suffered.[37]

Equating such a scenario to achieving the American Dream may be viewed as extremely strange at best. Yet the similarity between game shows, lotteries, and tort litigation is not as farfetched as one might think. In all three situations the desired end is a trip to the bank with a fat check. In recent years a number of court cases have resulted in such judgments. Thus like game shows and lotteries, injury and product liability lawsuits can be extremely lucrative. And once again, in such a process the traditional road to the American Dream is circumvented. Ben Franklin’s industry and Lincoln’s labor ethic are not components of a plaintiff’s road to riches. The classic American ingredients of hard work, frugality, and self-reliance do not appear in the lawyer’s brief. America’s new Poor Richard mantra has become “Early to bed, early to rise, file a law suit and sue till’ they cry.”

There is, however, a strange component within the legal avenue to the American Dream. People required to physically injure themselves in order to win. Injury is thus a unique component of achieving the American Dream through litigation and therefore begs the question, “who in their right mind would trade health for a financial bonanza?” Of course, those who do, or at least fake injury.

Heading off such suits with the use of video, however, is hardly a foolproof strategy. There are undoubtedly thousands of cases in which plaintiffs fake injury and symptoms in order to reap financial reward. For those attempting to cheat the system through fictitious injury and false testimony there is little doubt that they are in it for the money, and in doing so attempting to circumvent the traditional means of attaining the American Dream. Yet what of those who are genuinely injured and sue? Are they too culpable for making an end run around hard work and self-reliance in order to gain financial compensation?
independence? Do the truly injured not deserve some degree of compensation for pain and suffering? Many Americans would agree that blatant negligence on the part of one party, resulting in injury to another should be reasonably compensated. In this respect, one might argue that at the outset there existed no willful attempt on the part of the injured to make a payday out of their predicament. Still, the readiness of some individuals to file lawsuits, the sizable jury awards, and the failure of plaintiffs to take responsibility for what often seems clearly hazardous behavior makes litigation look like the yellow brick road to the American Dream. One merely needs to look at a handful of cases to see why tort reform has become such a hot topic in the United States.

When a 46 year old Korean immigrant was electrocuted by the “L” train line in Chicago his family sued and won $3 million in damages. Such an award may not seem outlandish if Mr. Lee had stepped onto a faulty rail line or bumped into an exposed wire. Instead, he walked home from a party with a blood alcohol level three times the legal limit, decided to walk past three signs that stated "Danger," "Keep Out," "Electric Current," then proceeded to urinate on a live rail line. He was electrocuted instantly. For contributory negligence the $3 million reward was cut in half.

In Hanover Park, Illinois an unlicensed Thomas Redlin, after having been drinking, borrowed a friend’s motorcycle and ultimately crashed into an unmarked median strip. He was paralyzed from the waist down and sued the town for failing to notify drivers of the median. His $6.75 million award was lessened by 10% because of contributory negligence.

In both Illinois cases huge cash settlements provided either the family or the American Dream. Assuredly, the parties in the two cases would most likely prefer to have their health intact. Thus we are again faced with the "strange" factor in the litigant’s quest for the American Dream. Neither of these gentlemen the morning and decided that today will be the day that leads me to participate actively pursuing the Dream from the start. For most one that often divorces the injured party from taking responsibility for their actions, something that opponents of such lawsuits. Why, they argue, should someone else have to pay when an individual’s conduct is clearly negligent and dangerous?

The failure to take responsibility is another element that ties tort litigation accident victim who causes their own injury but expects someone else to pay is very similar to the individual financial success is owed to them regardless of their lack of work ethic. In both cases, neither party accepts responsibility for their situation. Instead, they maintain a sense of entitlement that justifies their

Connected to the twin problems of failure to take responsibility and to engage in the same conduct. When an injured party who is clear cases, files a lawsuit and wins, there can be little doubt that it contrives the system to get their piece of the financial pie. The end result is a society always the same: money. Not all lawsuits result in million dollar seemingly innocuous incidents. The 1998 American Bar Association Journal reported amounts won in "The Torts of Summer." Slipping on algae in a swimming pool gained one Florida resident $41,000. Getting hit by a softball during warm-ups in the same state provided another individual with $52,000. A collision in a splash pool at a New Jersey water park resulted in a reward of $130,000. Burns from hot coals at a public beach in California granted the victim $435,000.

Equally unbelievable is the Miami, Florida woman who collected $250,000 after binging on cocaine and alcohol, then splashing herself with alcohol, was burned when she attempted to light a barbecue. Or the San Francisco mugger who was awarded $24,595 after being injured when the cab driver he was attempting to rob pinned his leg to a wall until the police arrived.

These seemingly "frivolous" lawsuits have initiated a major push for tort reform. State legislatures have responded with a variety of
measures: caps on punitive damages, abolishment of punitive damages if a product complied with state or federal regulations, requiring plaintiffs to waive all rights of medical confidentiality in court costs.[44]. The Federal Government has also taken up the tort reform banner. Legislation concerning product liability has been introduced in Congress, and failed, each year since 1983.[45]. In "Contract With America."[46] The reason for such action on the part of the nation's legislators is simple: like many Americans they are tired of what one Illinois lawmaker described as "unfair, ridiculous, frivolous, silly lawsuits."

Opponents of tort reform are equally adamant in their denunciation. The percentage of potential tort plaintiffs pursue litigation, that tort claims have not increased over the last decade and, in fact, product liability cases have declined.[48]. Moreover, they insist that reform would reduce legal protection for "at-risk" individuals such as the poor, the elderly, and the sick. What lawyer, argues opponents of reform, would take on cases that necessitate significant amounts of time, money, and labor unless they could be certain of victory?[49]

The case that has become the poster child for both pro- and anti-tort reform advocates is the infamous McDonald's hot coffee spill in which an elderly woman was awarded $2.9 million after accidentally pouring hot coffee on to her lap and suffering a serious burn. On the surface the case looked like a quintessential example of tort litigation gone haywire. A woman takes what is known to be a hot beverage, places it between her legs in a car, and proceeds to spill it millions. Critics of a legal system run amok had a field day, publishing headlines critical of the verdict: "Big Bucks for Dumb Luck? Coffee is Hot and Life is Full of Risks--Deal With It;" "The Legal Wheel of Fortune is Spinning Out of Control;" "A Great Year for Victims, Some of Whom Could Be Dangerous;" "Enough Already!"

America's popular culture comedians also latched on to the absurdity of the case. David Letterman included as number four on his "Top Ten List of Dr. Kevorkian's Tips for Summer," that one should take a bunch of friends to McDonald's and pour hot coffee on each other. On another show Letterman suggested that the number eight, blizzard safety tip was to clear snow off of the driveway with just one scalding hot cup of McDonald's coffee. Jerry Seinfeld even aired an episode in which Kramer filed a hot coffee lawsuit.

As a result of such commentaries, many Americans increased their distaste for what they considered an already ridiculous legal system that allowed irresponsibility to be rewarded. The flip side of the case, however, and what anti-tort reform advocates continually attempt to point out is that the verdict was in fact justified. Additionally, the verdict was ultimately overturned. Stella Liebeck, the burn victim, received only $640,000. Moreover, the facts in the case were more serious and egregious than most realized. Liebeck suffered second and third degree burns, spent a total of three weeks in the hospital, and underwent surgery for skin grafts. She first contacted McDonald's only to request $10,000 for medical bills, which they refused. Additionally, McDonald's, who served their coffee at a scalding 180 degrees, had received upwards of 700 reports of similar burn incidents, but did nothing to address the problem. Finally, the $2.3 million in punitive damages represented exactly two days of McDonald's coffee sales. The jury was attempting to send a message to the fast food giant.[52]

The reality of the case, especially what seems like McDonald's wanton indifference to complaints that their coffee was too hot, may cause some to rethink the importance of big cash settlements in product liability cases. This is certainly the hope of anti-tort reform advocates. Reality, however, nor tort reform, are the real intent of the present article. Most Americans do not know the specifics of the McDonald's case. They have seen only that a woman was awarded millions for spilling coffee. Her pyrrhic victory encouraged others who were more than happy to use the hot beverage spill to reap economic reward. Since Liebeck's 1994 incident a host of hot beverage lawsuits have been filed against McDonald's, Burger King, and the like.[53] Thus the moral of the story is that a variety of people viewed the original case as a lesson plan for achieving the American Dream.
Opponents of tort reform insist that the legal system is not overburdened with personal injury and product liability cases. They argue, only a handful of very publicized cases that create such a perception. Yet in America it is the perception that lawsuits are justified "about half of the time." Other research shows that the civil litigation system is overburdened by claimants seeking awards in meritless cases.

The mass of Americans are not familiar with legal articles that may suggest that some litigants are getting rich as a result of their own folly, real sense of entitlement, and social atmosphere encouraging lawsuits. In doing so the injured begin their litigious quest with no work ethic, and no perseverance or self-reliance involved. As a result, the traditional sense of work ethic, and responsibility for their own mistakes, plaintiffs look to the legal system to make misfortune into fortune. Again, marketing and an avalanche of advertising by personal injury lawyers helps encourage would-be injury victims.

The "rags to riches" legend has and continues to be a cornerstone of the American Dream. The traditional message taught that through hard work, frugality, and self-sacrifice one could achieve financial success. Abraham Lincoln sang the praises of the northern labor system, and I helped to establish basic guidelines for success in a land of infinite possiblity.

There are unquestionably many Americans who continue to abide by such tenets. There are also those who have come to believe that the American Dream's promise of riches is just that, feel entitled to instant financial success. Nor has the socio-corporate climate in America disappointed such a belief. Savvy producers and marketing executives have latched on to the core of the American Dream, enthralled with striking it rich. Thus millionaire game shows are designed to make winning seem easy. The reality in both instances is that achieving the American Dream such means is a long shot at best. Too much chance exists. Too much gratification merely products of an ethic already lost to some Americans.

What is the end effect on society? Do millionaire game shows and promises and self-reliance that once embodied the American Dream, replace responsibility for their own mistakes, plaintiffs look to the legal system to make misfortune into fortune. Again, marketing and an avalanche of advertising by personal injury lawyers helps encourage the sense of entitlement that so many Americans are willing to utilize litigation to cash in on the American Dream. Equally culpable are the big businesses that capitalize on the quest for the Dream. In an ironic sense, such businesses are fulfilling the end effect on society.

The even darker side to this cultural phenomenon is how the sense of entitlement is lost to some Americans? Perhaps the truth lies somewhere in the middle.

Too much gratification merely products of an ethic already lost to some Americans.

What is the end effect on society? Do millionaire game shows and promises and self-reliance that once embodied the American Dream, replace responsibility for their own mistakes, plaintiffs look to the legal system to make misfortune into fortune. Again, marketing and an avalanche of advertising by personal injury lawyers helps encourage the sense of entitlement that so many Americans are willing to utilize litigation to cash in on the American Dream. Equally culpable are the big businesses that capitalize on the quest for the Dream. In an ironic sense, such businesses are fulfilling the end effect on society.

The even darker side to this cultural phenomenon is how the sense of entitlement is lost to some Americans? Perhaps the truth lies somewhere in the middle.
There are far too many scholarly manifestations of the American Dream to document in one category. For purposes of space I list, at most, only four works from each category that represent recurring themes. For King's vision of racial equality, see Martin Luther King, Jr., "The American Dream," Negro History Bulletin 31 (5) (1968): 10-15.

Larzer Ziff, ed., *Benjamin Franklin's Autobiography* (New York: Holt, Rinehart and Winston, 1951). Franklin focused on industry as a way to wealth and success: "Drive thy Business without Pains;" "At the working Man's House Hunger looks in, but God gives all Things to Industry;" "Then plough deep, while Sluggards sleep;" Diligence is "God gives all Things to Industry;" "Then plough deep, while Sluggards sleep; and you shall have Corn to sell to your desire." 

Max Weber, the German political philosopher and sociologist, is most well known for the tenets of Calvinism and the rise of capitalism. Like Benjamin Franklin, Weber focused on hard work, thrift, discipline to succeed and ultimately gain wealth. Weber, however, insisted that such a work ethic also helped to quell one's anxieties regarding the Protestant concern over predestination. For many, the Protestant Work Ethic, see R. H. Tawney, *The Protestant Ethic and the Spirit of Capitalism*, Talcott Parsons, (New York: Harcourt, Brace and Co., 1926).

Games, contests, and sweepstakes run afoul: A state of legal disorder, leadership
questions must be answered within ten seconds each. Those players who pass this round will advance to the second stage, where they will answer an additional five questions on the telephone. Correct answers allow the "semifinalist" to take part in a random drawing, from which ten contestants will be flown to New York to appear on the television program. In order to actually play the game, the ten "finalists" must answer a multi-part amount of time plays the actual game.
