## God's last offer: negotiating for a sustainable future.

**Author:** Ayres E

**Source:** New York, New York, Four Walls Eight Windows, 1999. [3], 357 p.

**Abstract:** Over the past years the earth has endured hurricanes, floods, wildfires, and droughts of unprecedented dimensions, as well as outbreaks of terrifying diseases, that have struck every continent afflicting millions of people. On the other hand, the economic situation across all countries is turning from bad to worse. This book, entitled God's Last Offer , presents the relationship between these events and their impact on the population. The author further identifies four phenomena that have altered and destroyed the life on earth that include the rate of carbon gas emission, rate of biological extinction, the unsustainable consumption, and the exploding human population. In addition, the book tries to sort through a jumble of rumor, hyperbole and indolence in the face of sophisticated techniques used by corporations, institutions and governments to perpetuate public indifference. Furthermore, the author emphasizes that the population creates these problems. The book offers hope and possibility to a sustainable future for the Earth that must be embraced immediately before it expires.
