Abstract: Psychology is one of the most fascinating fields of study. Almost everyone seems interested in understanding his or her own behavior, as well as the actions of others. Psychology is, by far, the most popular of the social and behavioral sciences and one of the most attractive to those who are interested in knowing more about people and their behavior. In college and universities, psychology has been one of the most popular majors for over three decades, and students are more likely to take an elective course in psychology than one from any other field. Not surprisingly, psychology has also become a popular high school offering.
