

Efficiency Of Internal Audit In Risk Management Strategies Of Star Rated Hotels In Nairobi Total vi

Jane Kawira

Abstract

The initiative was driven by realization that internal audit work was based on traditional where solution to problems come after the Company has already suffered loss. The gov wants Companies to adopt risk based audit approach, where the audit identifies the possibility and institute strategies to prevent problem from occurring. The purpose of this research to the efficiency of internal audit in risk management strategies and came up with recommend how internal audit can efficiently management risk in star rated hotels in Nairobi.

This study entails both qualitative and quantitative data hence descriptive research is valid purpose of this study. In Nairobi City there are 18 hotels rated three to five stars out of the 27 hotels and restaurant. This is 66.7% of the 1 to 5 star rated hotels and restaurants from Therefore the sample population was 9 Managers, 45 departmental heads and 36 internal a making a total sample of 90 out of 180. The study used stratified random sampling method to focus on the respondents that have the information to being sought. The captured was p by use of tables and percentages to enhance a meaningful description. Weighted aver calculated where necessary to determine positive or negative position on each stateme respondents then ranked accordingly. Furthermore, inferential statistical analysis (chi-squ

used to measure statistical significance of the variables.

*Respondents indicate there was Risk Management in hotels, but it does not involve the stake
The inferential statistics analysis also showed that respondents were unfamiliar with
methods of Risk Management. However, the findings of this study show that the internal au
the hotel are lagging behind in the implementation of modern methods of Risk Manage
advocated by the various models. From the analysis, it can be concluded that internal aud
underperforming on thier role and hence inefficient.*
