The first evidence that there was a crisis looming for historic preservation came in 1988, when an informal study commissioned by the National Trust for Historic Preservation revealed that of 5,000 historic property museums, only 10% of them received less than 5,000 visitors annually. This was followed by a series of conferences on issues such as "The Future of the Historic Preservation in the 21st Century" and "Rethinking the Uses and Stories of Historic Sites." In the first decade of the 21st century, these efforts have shifted their emphasis on problem-solving, from creating a more professional management model to the more drastic option of deaccessioning collections.

Experts predict that the trend of deaccessioning will not only continue but also has a most stunning example to date of a house museum shifting back to a residential use took place in December, 2006, when Colonial Williamsburg announced the sale of the sell Carter's Grove plantation (built from 1750-1755), once considered a major tourist destination. A spokesperson for Colonial Williamsburg said the sale was due to declining attendance and shifting priorities. In April, 2007, the plantation had protective easements in place, was listed with a specialty real estate agent for a price of \$19 million.
