# BCoS Cognitive Screen

  

**By :** Humphreys, Glyn W. [University of Oxford] ; Bickerton, Wai-Ling [University of Birmingham] ; Samson, Dana [UCL] ; Riddoch, M. Jane [University of Oxford]

Following different kinds of brain damage, including stroke, head injury, carbon monoxide poisoning, and degenerative change, people can experience a range of cognitive problems, in addition to any difficulties in motor function. These problems strongly influence a patient's ability to recover, but often patients are not routinely screened to detect them. BCoS Cognitive Screen is a new test instrument. The test pack consists of a manual, a ringbound Test Book, the Auditory Attention Test stimuli on CD, a pack of 15 Examiner Booklets, a pack of 15 Examinee booklets, and a set of test objects, all contained in a durable messenger bag. Developed to screen patients for cognitive problems, it provides a novel 'cognitive profile' across a range of cognitive processes within a one-hour testing session, that will indicate whether a patient has a clinical impairment (related to norms) in five primary domains of cognition: Attention and executive function, Language, Memory, Number skills, Praxis and action.
