World catalogue of insects. Volume 2: Hydrophiloidea (Coleoptera).

Author(s) : [Hansen, M.](#)

Book : [World catalogue of insects. Volume 2: Hydrophiloidea \(s. str.\) \(Coleoptera\)](#)
pp. ref.59 pp. of

Abstract : This catalogue treats the beetle superfamily Hydrophiloidea, commonly referred to as one of the major groups of aquatic beetles. Besides, aquatic beetles, however, the hydrophiloids also include a substantial number of forms living in terrestrial habitats (25% of the species, and 60% of the genera). Hydrophiloidea is here used in a relatively strict sense, comprising the families Helephoridae, Epimetopidae,

Hydrochidae, Spercheidae and Hydrophilidae. For each taxon, a reference is original description (author, year of publication, page). All synonyms, as well as important misspellings and misinterpretations are listed in chronological order of the valid name. The type localities and distribution is also given. After the main catalogue is an appendix containing lists of: sheer fossil species (only those genera); nomina nuda that could not be referred as synonyms to any hydrophilid species; and species that were originally described under hydrophiloid genera but are now excluded from the superfamily. Nomenclatural changes include 14 new genera, 14 new synonyms, and 34 new combinations.
