Elements of botanical microtechnique.

Author(s) : [SASS, J. E.](#)

Book : [Elements of botanical microtechnique](#) 1940 pp.ix + 222 pp.

Abstract : This is a very well written account of the elements of botanical microtechnique and it is to be regretted that the rather high price of 17s. 6d. will probably limit the number of copies sold. There have been a number of mimeographed editions before and it is not surprising to learn that there was a very big demand for them. The book is designed to meet the needs of teachers, prospective teachers and beginners. It does not claim to be an encyclopedic work and the number of references is limited. The book is divided into two parts-general principles and methods and special techniques. In the first part there are accounts of fixing, dehydration, infiltration and embedding, microtome sectioning and staining. Embedding in colloidin is discussed as well as

embedding. In the second part there are eight chapters-introduction, veget vascular plants, thallophyta, bryophyta, pteridophyta (reproductive structure), spermatophyta (reproductive structures), the construction, use and care of microscope, and photomicrography. A somewhat larger discussion of methods of studying dividing nuclei and chromosomes might very well have been included. It should be pointed out that the book does not give much space to accounts of such production and binding are of the usual high standard found in a McGraw-Hill book.

Record Number : 19411601240

Publisher : McGraw-Hill Publishing Company, Ltd., London

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Descriptor(s) : chromosomes, dehydration, methodology, nuclei, staining, structure

Identifier(s) : cell nuclei, methods
