Synopsis

Feminist critiques of science are widely dispersed and often quite inaccessible as a body of literature. We describe briefly some of the influences evident in this literature and identify several key themes which are central to current debates. This is the introduction to a bibliography of general critiques of science, described as the 'core literature,' and a selection of feminist critiques of biology. Our objective has been to identify those analyses which raise reflexive (epistemological and methodological) questions about the status of scientific knowledge and practice, both in general terms and in relation to biological research. We have abstracted these listings from a body of material compiled by members of the research project, 'Philosophical Feminism: The Critiques of Science,' which covers a range of discipline-specific critiques beyond biology, as well as the more general philosophical critiques which constitute the core of the present

* We gratefully acknowledge the generous support of the Social Sciences and Humanities Research Council of Canada for the research project, "Philosophical Feminism: Critiques of Science," jointly directed by Kathleen Okruhlik and Alison Wylie. Our work on a composite bibliography of feminist analyses of science has benefitted greatly from the advice of a number of colleagues whose interests parallel and complement ours. In particular, we would like to thank Lorraine Code, Sandra Harding, Lynda Lange, Jane Roland Martin, Gillian Michell, Susan Searing, Charlene Senn, and Joyce Trebilcot.
