Abstract

In *What Emotions Really Are: The problem of psychological category processes that fall under the vernacular category of emotion are sufficient to define the emotions. In this paper I restate what I mean by natural kind and I discuss the problem of natural kinds in a specific sense. In the following sections I discuss the two most promising theories of emotion associated with the writings of Antonio Damasio: the Jamesian theory of emotion associated with the writings of Antonio Damasio and the appraisal theory of emotion associated with the writings of Lazarus. I discuss representations that draws on multi-level appraisal theory in psychology.*
