The design and analysis of industrial experiments.

Author(s) : [DAVIES, O. L.](#)

Editors : [DAVIES, O. L.](#)

Book : [The design and analysis of industrial experiments.](#) 1954 pp.xiii + 636 pp.

Abstract : There was a time when industrial experimenters learnt about statistical methods and efficient designs from books written specifically for the use of statisticians and plant breeders. Methods have developed to such an extent, however, that industrial experimentation are appearing in their own right. This one is comprehensive, authoritative and interesting. Many of the usual chapter headings, such as randomised blocks and Latin Squares, and Factorial Experiments, will be found; but the present book is more than a collection of recipes.

will now benefit in his turn from the exceedingly complete presentation, especially the nature of significance tests in their complete generality (the subject matter of the more advanced tabulations. Sequential tests of significance, a modern form of which may yet find a use in agriculture, are set out in full detail, and the book contains its own reference tables for use in the various tests, together with a glossary of terms. J. W.

Record Number : 19541604025

Publisher : Oliver & Boyd, London.

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Descriptor(s) : field experimentation, field tests, glossaries, plant breeding, statistical methods, variety trials

Identifier(s) : latin square, statistical methods, terminologies
